M20 x 2,5

2 TAP

Use the specified tap to cut the holding thread into the cleaned hole. When tapping a hole it is recommended to use a suitable lubricant.

Warning: The thread repair device has not yet been tested for use in high pressure applications. Always check the device for damage before use. Do not use the device on any material that is not recommended for use.

Use the installation tool to wind the insert into the threaded hole using light downward pressure until it is flush below the surface.

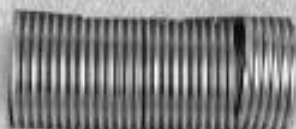

Warning: Do not work against the thread direction as the long may break off.

5 DONE!

You have successfully repaired your damaged thread. The new thread is normally stronger than the original.
