Contiene:

Broca

Terraja macho de acabado

Insertador de Helicoil

Puntero de rotura

Set espirales acero Inox

M20 x 2,5

2 TAP

Use the specified tap to cut the healing thread into the cleared hole. When tapping a hole it is recommended to use a suitable lubricant.

NOTE: The thread repair device has one of 100 taps with one or more threads in it. Always check the thread size and the tap size on the tap. Do not use a tap that is not the correct size.

Use the installation tool to wind the insert into the threaded hole using light downward pressure until it is below the surface.

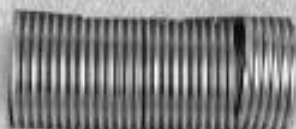

NOTE: Do not work against the thread direction as the tap may break off.

5 DONE!

You have successfully repaired your damaged thread. The new thread is normally stronger than the original.
